## 令和5年度5月度月例報告書

2023/05/30 M2 来代 勝胤 / KITADAI Masatsugu

 ${\bf Table\ 1\ Experimental\ conditions}$ 

| Mainstream velocity                    | 250              | $\mathrm{mm/s}$ |
|--|------------------|-----------------|
| Image size                             | $800 \times 600$ | pixel           |
| Frame rate                             | 800              | fps             |
| Shutter Speed                          | 1/1000           | $\mathbf{s}$    |
| Thickness of LLS(1)                    | 1.0              | mm              |
| Thickness of LLS(2)                    | 3.0              | mm              |
| Distance between $LLS(1)$ and $LLS(2)$ | 2.5              | mm              |
| Number of shots                        | 4000             |                 |

| Solver | pimpleForm            |                 |
|--------|-----------------------|-----------------|
| Volume | $150\times50\times50$ | $\mathrm{mm}^3$ |
| Mesh   | $75\times25\times25$  |                 |
| Inlet  | 250                   | $\mathrm{mm/s}$ |
| Outlet | Gauge pressure        |                 |
| Wall   | Slip                  |                 |

| Inspection volume   | $500 \times 400 \times 2000$ | $\mathrm{mm}^3$            |
|---------------------|------------------------------|----------------------------|
| Kinematic viscosity | 0.893                        | $\mathrm{mm}^2/\mathrm{s}$ |
| Mainstream velocity | 240 - 260                    | $\mathrm{mm/s}$            |
